What does AutoCAD do? AutoCAD is a 2D drafting program, originally for the desktop computer, but it is now an embedded tool in other types of computer graphics such as AutoCAD LT (a free version), Navisworks, and Sketchup. CAD is a system of graphical tools designed to facilitate the creation of three-dimensional drawings and models. Initially, CAD programs, such as AutoCAD, were used primarily by architects and engineers to create architectural and engineering drawings. Today, CAD software is increasingly used for other types of graphic design and modeling projects. AutoCAD's ability to create three-dimensional drawings has revolutionized the field of architectural and engineering design. CAD has since become a key tool for many other fields as well. The following image, showing a quick introduction of the overall functions of AutoCAD, is from Wikipedia. Features Some of the features of AutoCAD include: 3D drawing Drafting Architectural design 3D modeling Two-dimensional drawing Organization The following is an overview of the Autodesk AutoCAD Suite, which includes AutoCAD, AutoCAD LT, Map3D, eCAD Vision, and eCAD 360. Why choose AutoCAD? If you need a drawing program that's accurate and easy to use, then AutoCAD is worth your attention. It's a good investment that will enhance your job prospects. 1. Select the map. 2. Click the ellipse tool, and a small circle in the center of the map should appear. 3. Click the circle to create the center of a square. 4. Go to the parameters of the selected block. 5. In the middle of the ellipse, click the arrow to the left of the field "AXIS1". A small circle will appear around the center of the ellipse. 6. Then click on the center of the small circle, and move it to the right. Now you have a rectangle inside the ellipse, which is perfect for moving to any position on the map. 7. Move the rectangle to the right to about half the width of the ellipse. 8. When you do this, the ellipse and the rectangle become attached to each other. 9. Click on the ellipse again to make it active. 10. Click and drag on the rectangle to move it. Click on the square that is around the center of the ellipse to unselect it. This will let you work on the center of the ellipse and its shape separately. 11. You now have a rectangle to use in the selected block. To create your second part, start over from step 2. Make sure that the ellipse is selected and use the command "DESCRIBE". The result should look like this:
