Simulation/Animation AutoLISP API was introduced in AutoCAD Product Key 2000 and has since been enhanced. AutoLISP is a kind of procedural programming language, and can be used for a variety of purposes, including but not limited to visualization, automation, and functionality programming. AutoCAD's scripting language is called AutoLISP and supports execution in any 32-bit or 64-bit Windows OS, or in a 32-bit Windows OS with a 64-bit Windows application. For most of the user community, the most important use of AutoLISP is in creating macros for use in AutoCAD's commands. The major advantage of this method is that it is very fast to develop macros in AutoLISP. AutoLISP can also be used for larger projects, for example to automate a Drawing Order process or a large 2D or 3D database. The Autodesk Exchange Apps platform gives AutoCAD users access to thousands of free 3rd party extensions for the application, allowing users to extend the functionality of their software and get the best performance, value and support. Visual LISP allows users to program in a visual environment and add features to AutoCAD in a graphical way. This allows programmers to see the results of their work and make modifications. VBA is the Visual Basic for Applications. It allows developers to create application programs by working in Visual Basic or using Visual Basic Script. .NET APIs include COM and .NET version. COM APIs allow .NET application to interact with AutoCAD. .NET versions allow application development using C#, Visual Basic or any other .NET-based language. The Open Architecture for Layers (OAL) is an API for adding new information layers to a file. By using OAL, you can add/change/delete 2D features in a 3D model, such as adding floor plans to the 3D model. The layer is displayed on the same layer group, but at a different viewing angle. Since 2010, AutoCAD and AutoCAD LT use Autodesk's exclusive technology, WinJS, to provide native browser and Windows application development support. AutoCAD Architecture is a set of visual programming tools for architectural design. Architecture is a domain of knowledge, skills, and tools that focuses on building. Architectural design is the art and science of the formation and arrangement of a building or its parts and components. Building design is the activity of
