1.2 History Autodesk AutoCAD started out as the first CAD program for personal computers. In the early 1980s, personal computers were slow, so even the most advanced commercial CAD applications were only useful for a handful of users. AutoCAD was developed with that goal in mind, with a "right out of the box" installation process. For a long time, the program was almost exclusively sold to engineering firms to serve as the primary engineering design tool for their customers. At the same time, a series of upgrades and version releases improved the program's capabilities. (The company would later develop another, competing product, AutoCAD LT, which was designed with schools and small businesses in mind.) AutoCAD became the primary CAD system of choice at many firms, largely because it was simple enough for general-purpose use and didn't need to be retrained on each project. The software was designed to run without any programming knowledge, which made it an easy buy and a safe way to train new users. The visual interface was simple, and companies quickly came to rely on AutoCAD because it was familiar, and because it could be produced, installed, and customized easily. Around the turn of the century, CAD became a more diverse role for engineers. Changes in the design, manufacturing, and product development processes required programmers, analysts, and other so-called "software craftsmen."

This created a demand for CAD programs that were more sophisticated than the BASIC-based programs that had been used previously. Those products became the dominant CAD products in the market. In 2005, Autodesk purchased Alias, the creator of Alias Technology, and merged it with AutoCAD. In 2007, Autodesk released AutoCAD LT, aimed at schools and small businesses, which was designed to be more cost-effective than AutoCAD while offering many of the same features. That year, Autodesk also introduced a suite of graphics software for the Web and mobile devices. AutoCAD is now one of the world's leading CAD systems. In 2014, the company acquired part of the Perception team, a French software company.
